SUMMARY

Computer Science student with hands-on experience building agentic RAG systems and event-driven backend architectures. Currently interning at [Hewlett Packard Enterprise](#) and [Inspirante Technologies](#), building AI classification pipelines and scalable data ingestion systems. Interested in AI systems, distributed architectures, and backend engineering.

EDUCATION

B.E., Computer Science & Engineering, NMAMIT 2023-2027
CGPA: 9.65/10.00 - Course works: Object Oriented Programming, Database, Operating System, Networking

Pre-University Education - PCMCs, Vidyodaya Pre-University College 2021-2023
Aggregate: 97.67/100 - Karnataka State Board

EXPERIENCE

HPE CPP INTERN Feb 2026 - Present
[Hewlett Packard Enterprise](#)

- Built an event-driven pipeline auto-ingesting and normalising docs from GitHub, Confluence, and Jira.
- Designed an AI classification agent using multi-medoid clustering and vector pre-filtering to auto-group docs.
- Deployed a 3-layer Dockerized RAG service on Azure with tracing, delivering source-cited answers over the Knowledge.

SOFTWARE DEVELOPMENT INTERN Oct 2025 - Present
[Inspirante Technologies Pvt. Ltd.](#)

- Developing a scalable hostel management system supporting 3000+ students with role-based access control (RBAC).
- Engineering core modules including attendance tracking (biometric-integrated), bulk notifications, authentication.
- Automated bulk student onboarding via Excel ingestion with flexible schema handling and room allocation workflows.

PROJECTS

Sophia (Hybrid RAG System) - Next.js LangChain, Azure AI Search, PostgreSQL, Neo4j - ([Source Code](#))

- Built an AI assistant platform where users can create and train custom personas using their own data.
- Designed a hybrid RAG architecture combining knowledge graph (Neo4j) and vector database to enhance accuracy.
- Reduced hallucination rate by improving retrieval accuracy via hybrid RAG (vector + graph-based retrieval)

Hackfest '26 (Evaluation System) - Next.js, Typescript, TailwindCSS, Drizzle, PostgreSQL - ([Source Code](#))

- Built a scalable evaluation interface, handling 3000+ participants and 600+ submissions, reducing evaluation time by 60%+ via unified workflows.
- Implemented score normalisation logic to mitigate bias between strict and lenient judges, ensuring fair and consistent evaluation.

SKILLS

- AI Systems:** RAG, MCP Servers, Agentic Systems, Vector DBs, Knowledge Graphs, LangChain, LangGraph
- Backend:** FastAPI, Django, Node.js, REST APIs, Microservices, Distributed Systems
- Frontend:** React, Nextjs
- Cloud & DevOps:** Azure, Docker, Kubernetes
- Databases:** PostgreSQL, Neo4j, Redis, MongoDB
- Languages & Tools:** Python, TypeScript, Git, Github, Jira

LEADERSHIP & ACHIEVEMENTS

- DSA Lead, Finite Loop Club** - Led a 4-month DSA sprint, mentoring peers in data structures and algorithms.
- Conducted a Career Readiness Program session** for 250+ students, covering DSA, interview preparations.
- Mentored students** during a month-long hackathon, guiding them in ideation, problem-solving, scalable design.
- Finalist**, AI Innovation Hackathon (organised by [Kyndryl](#) and [Microsoft](#)).
- Second Runner-up**, Crack the Campus Crackathon (organised by [Castle Rock Inc](#)).
- Represented Nitte University at the South Zone Inter-University Cricket Championship in Chennai.
- Represented Karnataka at the SGFI National-Level Karate Championship in Madhya Pradesh.
